Tecelã Tecidos · e-commerce data model

Fictitious fabric store, Oct/2023 to Oct/2026: catalog, orders, GA4 tracking (server-side GTM), Meta, Google and TikTok Ads, attribution and regional MMM. 100% synthetic data.

44 tables · **144k** orders · **7.0M** sessions · **20.5M** GA4 events · **R$ 38.9M** paid revenue · **R$ 6.0M** paid media

Overview: 44 tables in 7 areas

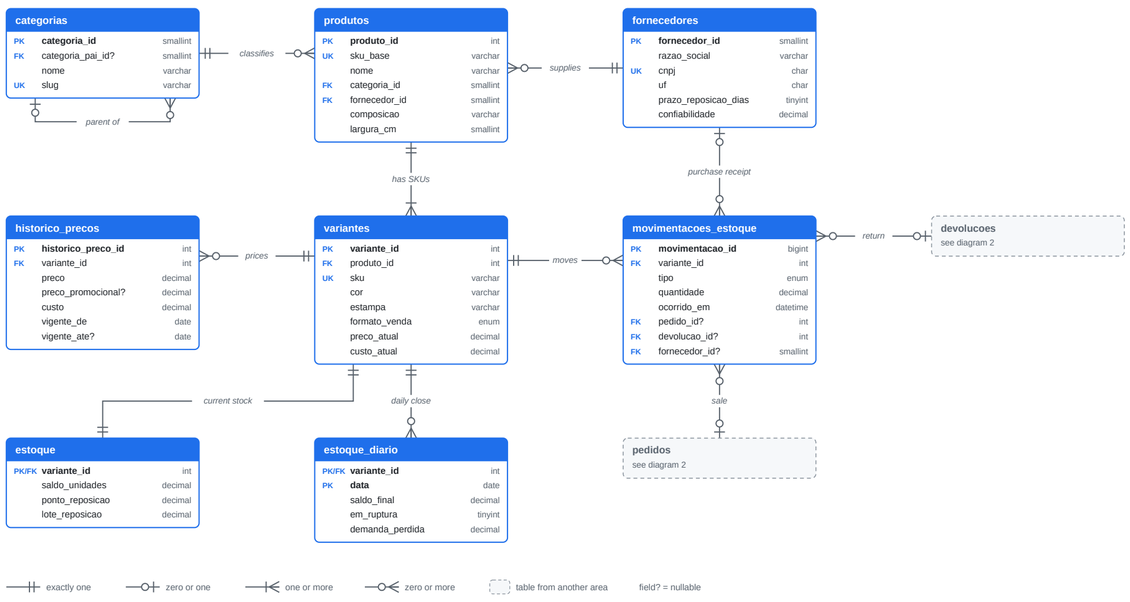

Each area has its own diagram (1 to 6). The lines show which keys link the areas.

Labels: keys that link the areas. Dashed line: logical link (no physical FK) or reconciliation of totals. Details in diagrams 1 to 6.

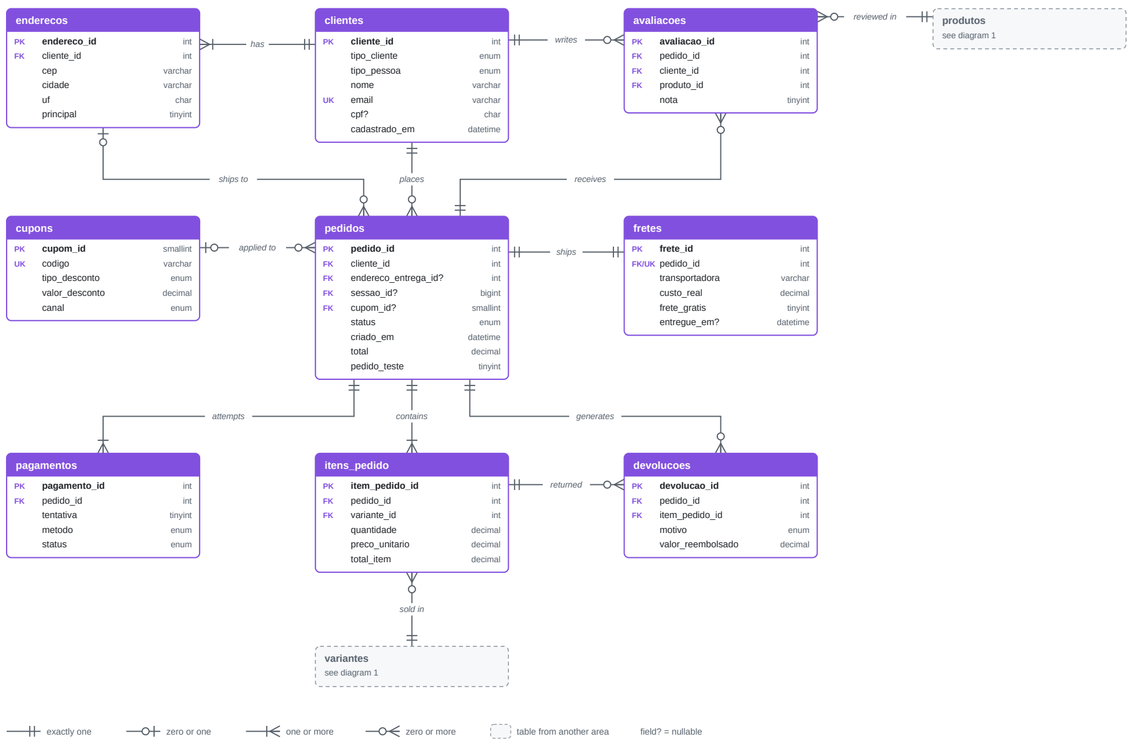

1. Catalog and inventory

Product, SKU (variant), price history (SCD2), stock balance and daily stock closing.

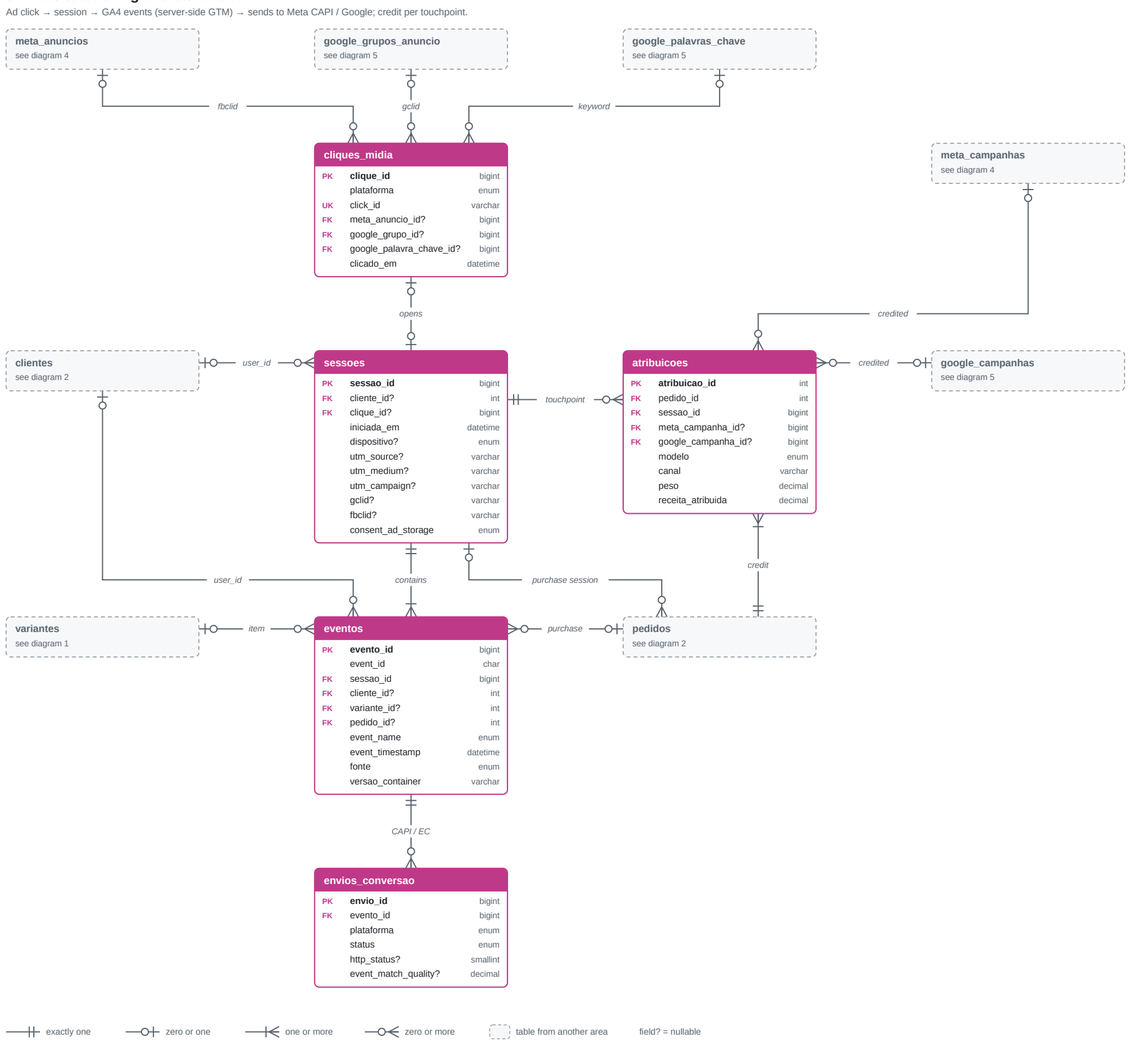

2. Customers, orders and after-sales

Customer registration, orders with items, payment attempts, shipping, returns and reviews.

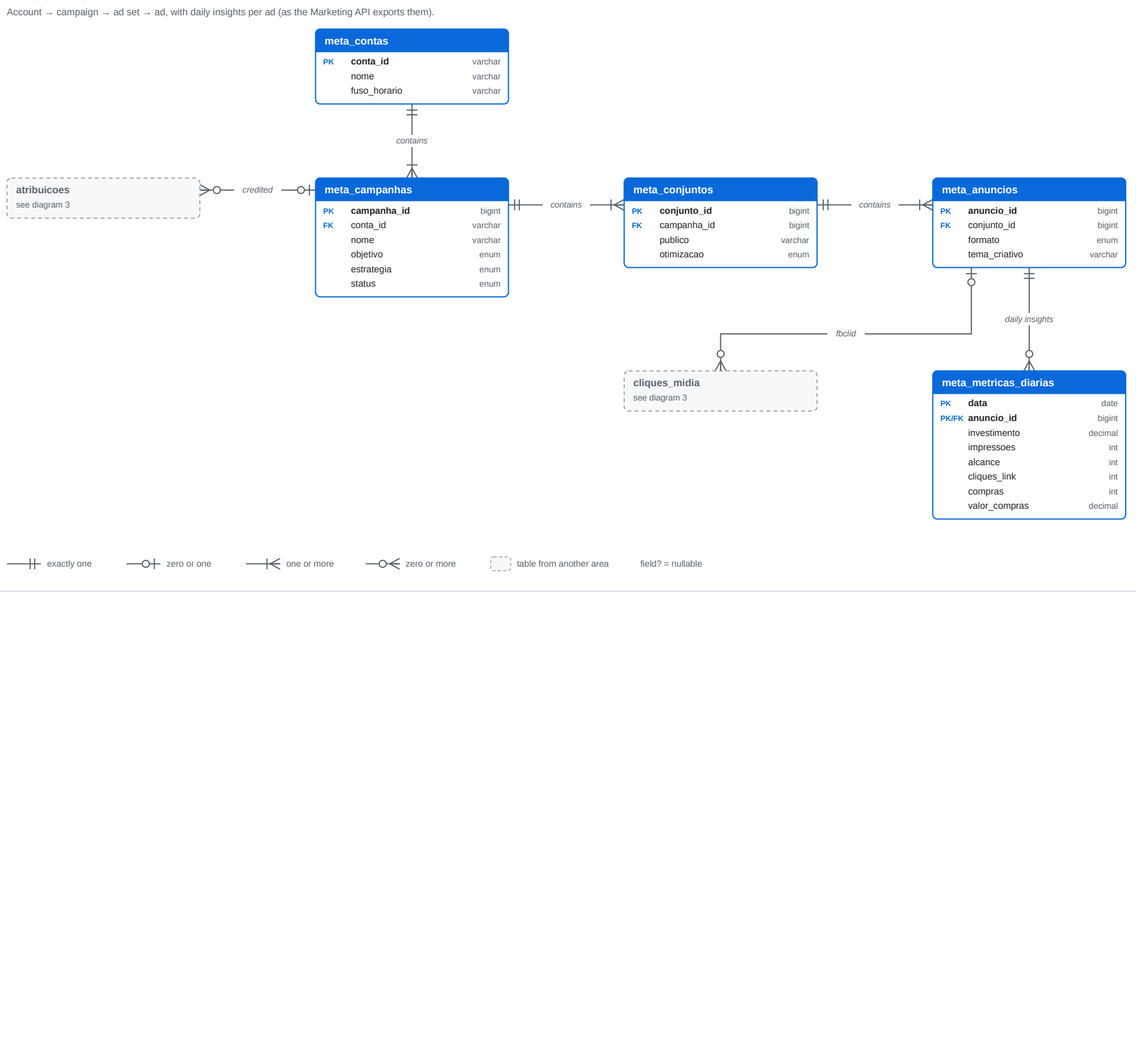

3. Website tracking and attribution

Ad click → session → GA4 events (server-side GTM) → sends to Meta CAPI / Google; credit per touchpoint.

4. Meta Ads

Account → campaign → ad set → ad, with daily insights per ad (as the Marketing API exports them).

5. Google Ads

Account → campaign (Search, Shopping, PMax, Demand Gen) → ad group/asset group → keyword, with daily metrics.

6. Regional MMM, geo tests and other channels

Media from every platform by day × channel × state; geo-lift; TikTok, affiliates and CRM. Dashed lines: logical link, no physical FK.
